

# Your Friends at EternaTree® Present The One Note Wonder

*“You can’t change the pitch, so you just change the key.”*

Not since Professor Harold Hill and the “Think System” has there been such a revolutionary concept in music notation. The One Note Wonder goes one step further and removes those bothersome pitch changes.

When you have an instrument with as selective a range as The One Note Wonder, you need a special method like ours so you can play all your favorites. With our innovative system you don’t have to worry about pitches moving up and down. All you have to do is move to the key that fits your single pitch (which is pretty close to an A).

Take, for example, this holiday classic - Jingle Bells:

Everything is fine for the first seven notes (A, the third pitch of the F major scale). But then along come C, F and G (the fifth, first and second pitches in F).

No problem when you have The One Note Wonder! Just find the keys that fit your single pitch. In what key is A the fifth note? D is the answer. And in what key is A the first note? A, of course. And finally, if A is the second note, the key must be G.

Other pitches are handled in the same manner and, with just a handful of key signature changes, Jingle Bells is ready for The One Note Wonder:

With this unique approach you will be able to play all your favorites in no time. After just a short while with our system you’ll get the idea and will be able to do the key changes in your head. It’s actually easier than writing it all down!

But if you need to use the music when you play, send us your favorite piece and, for the exceptional price of 25 cents per note, we’ll carefully decompose it for you in the style you see above. “We specialize in the minimum of memorable melodic material.”

As always, if you have any difficulties assembling or operating our product, don’t hesitate to call our 800 number.
