

Your Friends at EternaTree.com[®] Present

Something Useful (at last!)

For a change, this year your friends at EternaTree.com are sending you something you can actually use - a Phillips-head screwdriver (complete with bonus key ring!).

And to put it right to work, we've included a dust collector for you to assemble.

Join the wood pieces notch to notch (pegs upright).
Using your new tool, secure them with the screw.
Stretch one latex-free rubber band between the pegs, leaving about ¼ inch showing above the band.

To operate, pull the rubber band back and lock it in the firing pin.
Wedge a ping pong ball into the "V" near the pin.
Aim at your target and press down on the rear end of the pin.

Be careful what you shoot at –
even a ping pong ball has some zip
when propelled by a #64 rubber band.
